

Web Development with Flask

A Basic Walkthrough

Indroduction

Writing Flask Application

Indroduction

I will assume all of you have:

- Basic knowledge of **python**.
- Some experience with database.

What you will see in this talk:

- Creating a simple Flask application.
- Adding functionality and playing with it.

What you won't see:

- Javascript pitfalls.
- Problems involving
 - **Cross-Domain Request**
 - **Ajax**
 - **CSS**
 - ...

Good luck.

What you will need to get started with Flask:

- Python
- MySQL
- Flask and `mysql-connector` package (using `pip` or whatever)

What is that i

- Flask is a micro-framework for python
- Easy to code
- Flexible
- Good documentation
- RESTful

Writing Flask Application

Hello world, again! i

Now create a file `hello.py`, write some code.

Flask provides template engine on top of Jinja to render html response.

Things get complicated i

Show me the code
